

**New Installation:**

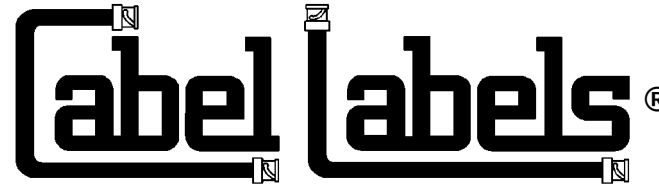

Insert CD into Drive.  
Change to the: **cablelabels** directory.  
Run **Setup.exe** - this will install the program and create the necessary Shortcuts.

**Notes on upgrading an existing Version.**

SOF2011 uses a new Database format.  
Old Databases are automatically converted when opened for the first time.  
Upgrading does not replace, delete or change existing Versions.  
**OLD AND NEW VERSIONS OF THE SOFTWARE MUST NOT BE RUN CONCURRENTLY.**  
A **NEW DIRECTORY** must be used for this version.  
New (**empty**) **Temp Store** and **Print Buffer** will be created in the new directory.  
The existing **Temp Store** may be reused – see below.  
New (**default**) **Cable Library**, **Connector Library** and **Presets** are created in the new directory.  
The existing versions of these may also be reused – see below.

**Upgrade Procedure:**

**MAKE BACKUPS** of all Databases.  
Perform the **New Installation** procedure above.  
If desired perform the following steps:  
To reuse the old **Temp Store** with the software:  
    **The Database System must NOT be running.**  
    Copy the old **Temp Store** (WCLDBTS.\_TS) to the new directory.  
    In the new directory rename it from **WCLDBTS.\_TS** to **OLDTSTORE.CLD**.  
    Start the Database System  
    Open **OLDTSTORE.CLD** and copy its contents into the new "Temp Store".  
To use the old **Cable Library**, **Connector Library** and **Presets**.  
    **The Database System must NOT be running.**  
    Copy the old **CABLABLE.CCL** file to the new directory.  
    In the new directory rename it from **CABLABLE.CCL** to **CABLABLE.NEW**.  
    Start the Database System and the old Library will be automatically upgraded.

*Keeping Track of both ends....*

**Schematic on the Fly 2011.**

Other features from SolutionBase® are also included.

**Installation Instructions are on back cover.**
